DATALOGIC

CBX100
Installation Manual

The CBX100 is a connection box which can be used as an accessory to facilitate system connections for installation and device replacement of several Datalogic family reading devices.

System cabling is made through spring clamp terminal blocks inside the CBX100 while the reading device is connected to the CBX100 through a 25-pin connector on the housing.

A 9-pin connector placed inside the CBX100 facilitates connection between an external PC and the auxiliary serial interface of the reading device for configuration or data monitoring.

CBX100 can also house an accessory Backup and Restore Module to make system maintenance extremely quick and easy.

SAFETY PRECAUTIONS

ATTENTION: READ THIS INFORMATION BEFORE INSTALLING THE PRODUCT

POWER SUPPLY

This product is intended to be installed by Qualified Personnel only.
This device is intended to be supplied by a UL Listed NEC Class 2 power source.

⚠ **CAUTION** — *Total power consumption is given by adding the CBX100 power consumption to that of all the devices powered through the CBX100 (reading device, P.S., I/O). Refer to the manual of the connected devices for details about minimum/maximum supply voltage and power consumption.*

Each CBX100 supports only 1 single reading device + system accessories.

SUPPORTED READING DEVICE MODELS

The CBX100 can be directly connected to the following readers through the 25-pin connector illustrated in Figure A.

Linear Scanners				2D Readers
DS2100N	DS2400N	DS4800	DS5100	All Matrix x10 family
DS6x00	DX6400	DS8100A	DX8200A	All Matrix x10N family

👆 **NOTE** — *CBX100 is backward compatible with DS4600A, DS2100N/DS2400N (black body), and DS1100/DS2200 10-30 Vdc model reading devices using the ADP-MM1 25-pin gender changer. See the Gender Changer documentation for the relative CBX100 pinout.*

OPENING THE CBX100

To install the CBX100 or during normal maintenance, it is necessary to open it by unscrewing the two cover screws:

⚠ **CAUTION** — *The CBX100 must be disconnected from the power supply during this operation.*

MECHANICAL INSTALLATION

CBX100 can be mounted to various wooden or plastic surfaces using the two self-threading screws (3.9 x 45 mm) and washers provided in the package.

Mounting to other surfaces such as concrete walls or metallic panels requires user-supplied parts (screws, screw anchors, nuts, etc). A mounting template is included in the package to facilitate hole drilling alignment.

CBX100 can also be mounted to a DIN rail or a Bosch Frame using the following mounting accessories: BA100 (93ACC1821), BA200 (93ACC1822).

The diagram below gives the overall dimensions of the CBX100 and shows the two mounting through-holes.

Figure 1 - Overall Dimensions

ELECTRICAL CONNECTIONS AND SETUP

The following figure shows a typical layout.

Figure 2 – System Layout

The dotted line in the figure refers to an optional (temporary) hardware configuration in which a portable PC can be quickly connected to the CBX100 (and consequently to the reading device auxiliary interface) through the internal 9-pin connector. This allows monitoring of the data transmitted by the reading device or configuration through the utility program (see the reading device Installation Manual for more details). The reading device auxiliary interface signals are also available on the internal spring clamp connectors.

After making system cabling and switch settings, connect the reading device to the 25-pin connector on the CBX100 housing.

Switch ON the CBX100 power switch (see Figure 3). The Power LED turns on (blue) when the power connection has the correct polarity. The Power LED turns on (red) in case of wrong polarity.

After system functioning has been verified, close the CBX100 using the 2 cover screws.

POWER SUPPLY

Power is supplied to the CBX100 through the Vdc and GND pins provided on the spring clamp connector.

The power switch (see Figure 3) switches the power supply ON or OFF for both the CBX100 and the connected reading device.

⚠ **CAUTION** — *The power switch does not control power to the Vdc/GND, +V/-V spring clamps, therefore any devices connected to these signals (i.e. external trigger, encoder, etc.), are live and are not protected from polarity inversion. Disconnect the power supply when working inside the CBX100.*

Figure 3 - Power Switch ON/OFF Positions and Connections

👆 **NOTE** — *Vdc is electrically connected to +V, just as GND is electrically connected to -V. This is useful for supplying external trigger, inputs and outputs from the CBX100 power source, however +V and -V signals should not be used as power supply inputs to the CBX100.*

The power supply must be between 10 and 30 Vdc only.

👆 **NOTE** — *To avoid electromagnetic interference:*
- *Connect CBX100 Protection Earth (Earth) to a good earth ground.*
- *Connect the reading device chassis to earth ground through the jumper, (default setting, see Figure 7).*
- *Connect the Network Cable Shield (Shield) to Filtered Earth through the jumper (default setting, see Figure 6).*

SYSTEM WIRING

The connection and wiring procedure for CBX100 is described as follows:

1) Open the CBX100 by unscrewing the 2 cover screws.
2) Verify that the CBX100 power switch is off (see Figure 3).
3) Unscrew the compression connectors and pass all the system cables through them into the CBX100 housing.
4) To connect the power and input/output signals:
   - Prepare the individual wires of the system cables by stripping the insulation back approximately 1 cm.
   - Using a device such as a screwdriver, push down on the lever directly next to the clamp (see Figure 4).
   - Insert the wire into the clamp and release the lever.

   The wire will now be held in the spring clamp.
5) Tighten the compression connector nuts so that the internal glands seal around the cables.

Figure 4 - System Cable Connections

Flexible stranded wire should be used and must meet the following specifications.

All positions: 24 - 16 AWG   0.2 - 1.5 mm²

The CBX100 spring clamp connector pinouts are indicated in the Pinout table.

Refer to the reading device Installation Manual for signal details.

Pinouts		
Group	**Name**	**Function**
Input Power	Vdc	Power Supply Input Voltage +
	GND	Power Supply Input Voltage -
	Earth	Protection Earth Ground
External Trigger Input	+V	Power Source – External Trigger
	I1A	External Trigger A (polarity insensitive)
	I1B	External Trigger B (polarity insensitive)
	-V	Power Reference – External Trigger
Generic Input	+V	Power Source – Inputs
	I2A	Input 2 A (polarity insensitive)
	I2B	Input 2 B (polarity insensitive)
	-V	Power Reference – Inputs
Outputs	+V	Power Source – Outputs
	-V	Power Reference – Outputs
	O1+	Output 1 +
	O1-	Output 1 -
	O2+	Output 2 +
	O2-	Output 2 -
Auxiliary Interface	TX	Auxiliary Interface TX
	RX	Auxiliary Interface RX
	SGND	Auxiliary Interface Reference
ID-NET™	REF	Network Reference
	ID+	ID-NET™ Network +
	ID-	ID-NET™ Network -
Network	Shield	Network Cable Shield

		RS232	RS485FD	RS485HD
Main Interface		TX	TX+	RTX+
		RTS	TX-	RTX-
		RX	*RX+	
		CTS	*RX-	
		SGND	SGND	SGND

The input power signals **Vdc**, **GND** and **Earth** as well as the network signals **REF**, **ID+**, **ID-** and **Shield** are repeated to facilitate system cabling. In this way the power and network busses can enter and exit the CBX100 from different spring clamps but be physically connected together.

POWER SOURCE JUMPER SETTINGS

For most applications input power is provided through the dedicated spring clamp connectors inside the CBX100.

However CBX100 may accept power from the connected reading device through the 25-pin connector. This is useful, for example, to pass power to connected accessories such as Encoder and Presence Sensor from DX8200A VAC models or 6K/8K scanners powered directly through the network. See the relative reading device Reference Manual for details.

To power CBX100 from the reading device, the power source jumper must be placed in the "power from device" position as indicated in Figure 5.

power from device | power from clamps (default)

Figure 5–Power Source Jumper Settings

SHIELD TO PROTECTION EARTH JUMPER SETTINGS

The network cable shield (Shield) can be connected to Earth Ground (Earth) either directly or through a filter circuit. If the jumper is left open, the network cable shield (Shield) is floating.

Earth | floating | Filtered Earth (default)

Figure 6– Shield to Protection Earth Jumper Settings

CHASSIS GROUNDING JUMPER SETTINGS

The reading device chassis grounding method can be selected by positioning a jumper (see Figure 7). In this way the reading device chassis can be connected to earth ground (only if pin Earth is connected to a good earth ground). For all reading devices except 6K/8K, the chassis can alternatively be connected to the power supply ground signal (GND) or it can be left floating but, in this case, the jumper must be removed. For 6K or 8K scanners the chassis is internally connected to GND.
All Reading Devices (except 6K/8K)

to GND | floating | to Earth (default)

6K, 8K Family Scanners

The scanner chassis is internally connected to GND | to Earth (default)
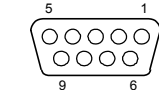

Figure 7 – Chassis Grounding

9-PIN READING DEVICE AUXILIARY SERIAL INTERFACE

The reading device auxiliary serial interface available on the internal CBX100 9-pin connector can be used either for configuration or for data monitoring.

Connections can be made to a PC or Laptop using a straight through cable or a USB-RS232 converter.

The details of the connector pins are indicated in the following table:

CBX100 9-pin D-Sub Female Connector Pinout

| Pin	Name	Function
2	TX	Auxiliary RS232
3	RX	Auxiliary RS232
5	SGND	Auxiliary Reference Ground
1, 4, 6, 7, 8, 9		N.C.

NETWORK BUS TERMINATION

ID-NET™

Figure 8 – ID-NET™ Termination Resistance Switch

The ID-NET™ termination resistance switch enables or disables the insertion of the bus termination resistor for ID-NET™ network applications.

> ⚠ **CAUTION**
> *In ID-NET™ network applications the termination resistor must be enabled ONLY on the first and last devices of the chain. On all the other devices this resistor MUST NOT be enabled (OFF).*
RS485 HD

Figure 9 – RS485 HD Termination Resistance Switch

The RS485 HD termination resistance switch enables or disables the insertion of the bus termination resistor for RS485 Half Duplex Multidrop applications.

> ⚠ **CAUTION**
> *In Multiplexer applications the termination resistor must be enabled ONLY on the last device of the chain, the farthest away from the Multiplexer (assuming the Multiplexer is the first device of the chain). On all the other devices this resistor MUST NOT be enabled (OFF).*

BM100 BACKUP AND RESTORE MODULE (ACCESSORY)

The BM100 Backup and Restore Module (separate accessory) provides configuration parameter backup. It can easily be installed by aligning it over its corresponding connector in the CBX100 and pushing down until correctly seated. When closed, the plastic support inside the CBX100 cover holds the module in place. For further details see the BM100 manual.

Figure 10 – BM100 Accessory Mounting

> 👆 **NOTE**
> *All-in one models come with BM100 pre-installed.*

## INDICATOR LEDS

blue/red
yellow
green
yellow
green

Figure 11 – Indicator LEDs

There are five Indicator LEDs which signal power and I/O activity and are visible from the CBX100 outside cover.

The Power LED is blue when power is correctly applied to the CBX100 and the power switch is turned on.

This LED is red if power polarity is incorrect. In this case the connected reading device and optional Backup Module are protected.

> ⚠ **CAUTION**
> *If external I/O devices are powered through CBX100 (connected to +V/-V), they are not protected from polarity inversion.*

The remaining four LEDs signal activity on the relative I/O lines. Their meaning depends on the software configuration of the connected reading device.

TECHNICAL FEATURES

ELECTRICAL FEATURES	
Supply Voltage	10 to 30 Vdc*
Consumption	0.5 – 0.3 A
Limited Current Consumption CBX + reading device consumption (see related manual)	2.5 A Max
Inputs	Non opto-isolated polarity insensitive 30 Vdc max; 12 mA max
Outputs	Opto-isolated polarity sensitive 30 Vdc max; 40 mA max continuous 130 mA max pulsed

USER INTERFACE	
LED Indicators:	Power On/Polarity Error (blue/red), Trigger (yellow), IN2 (green) OUT1 (yellow), OUT2 (green)

PHYSICAL FEATURES	
Mechanical Dimensions	138 x 128 x 62 mm (5.4 x 5 x 2.4 in.)
Weight	about 380 g. (13.40 oz.)

ENVIRONMENTAL FEATURES	
Operating Temperature	0° to 50 °C (+32° to 122 °F)
Storage Temperature	-20° to 70 °C (-4° to 158 °F)
Humidity max.	90% non condensing
Vibration Resistance EN 60068-2-6 2 hours on each axis	14 mm @ 2 to 10 Hz 1.5 mm @ 13 to 55 Hz 2 g @ 70 to 200 Hz
Shock Resistance EN 60068-2-27	30 g; 11 ms; 3 shocks on each axis
Protection Class EN 60529	IP65 (when compression connectors and reading device are correctly connected)

The features given are typical at a 25 °C ambient temperature (if not otherwise indicated).

* for further details about minimum/maximum supply voltage refer to the manual of the connected reading device, since the minimum supply voltage required may be >10.

SUPPORT THROUGH THE WEBSITE

Your product Reference Manual including installation procedures is available for download on our website as well as the configuration program.
Datalogic provides several services as well as technical support through its website. Log on to **www.datalogic.com** and click on the **SUPPORT** > **Unattended Scanning Systems** category link. From this page you can select your product model from the dropdown list which gives you access to: Downloads including Data Sheets, Manuals, Software & Utilities, and Drawings; Repair Program for On-Line Return Material Authorizations (RMAs) plus Repair Center contact information; Service Program containing details about Maintenance Agreements; Technical Support through email or phone.

CE COMPLIANCE

CE marking states the compliance of the product with essential requirements listed in the applicable European directive. Since the directives and applicable standards are subject to continuous updates, and since Datalogic promptly adopts these updates, therefore the EU declaration of conformity is a living document. The EU declaration of conformity is available for competent authorities and customers through Datalogic commercial reference contacts. Since April 20th, 2016 the main European directives applicable to Datalogic products require inclusion of an adequate analysis and assessment of the risk(s). This evaluation was carried out in relation to the applicable points of the standards listed in the Declaration of Conformity. Datalogic products are mainly designed for integration purposes into more complex systems. For this reason it is under the responsibility of the system integrator to do a new risk assessment regarding the final installation.

Warning: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

FCC COMPLIANCE

Modifications or changes to this equipment without the expressed written approval of Datalogic could void the authority to use the equipment.
This device complies with PART 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference which may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

EAC COMPLIANCE

Customs Union:
The CU Conformity certification has been achieved; this allows the Product to bear the Eurasian mark of conformity.

LEGAL NOTICES
